Holiday peak forecasting accuracy improved ~15-20% · Enabled proactive FC capacity planning · Frozen SKU cap at 98%
flagged 6 weeks before peak — prevented stockouts

02 Vendor Fill Rate & On-Time Delivery Scorecard

Supply chain analytics · Vendor performance measurement & accountability

Fill Rate / On-Time — Weighted Vendor Scorecard

ANALYTICS MANAGER

Measures vendor delivery performance across fill rate, on-time %, and order acknowledgement. Feeds directly into vendor accountability conversations and sourcing prioritization with the Buying team.

DATA SOURCES

PO Product Lines

Ordered vs received quantities per PO — primary fill rate source

PO Line Snapshot

Version history of purchase orders — anchors original order timestamp

Vendor Portal Proposals

Vendor acknowledgements and replies to POs via supplier portal

PO Receipt Issues

Ticket types for short ships, rejections, and receipt problems per PO

Delivery Calendar Config

Vendor lead times and estimated delivery dates by FC

03 Internal Replenishment System (IRS) — Analytics Layer

Collaborated with PMs & Engineering to build the SQL analytics backbone powering a proprietary replenishment tool

IRS Network Calculation — Order Recommendation Engine

ANALYTICS MANAGER

Designed and maintained the SQL data layer feeding the internal replenishment system — translating network-level inventory signals, demand forecasts, and DC delivery schedules into SKU-level order recommendations surfaced to buyers in real time.

DATA SOURCES

IRS Network Calculation

Core engine output — target qty, available qty, DOH, safety stock, and order recommendations per SKU × FC

IRS Purchase Order Product

Recommended POs with cost, pallets, delivery date, and submission status

Inventory Version

Real-time sellable inventory by SKU and warehouse

DC Schedule Details

DC→FC delivery lanes, lead times, review days, and order cycle config

Delivery Calendar Config

Vendor-level order frequency, ETA, and lead time per FC

Inventory Location History

Bin-level expiry data feeding into shelf-life logic of the engine

📖

Personal Data Dictionary — Table & Metric Registry

60+ core tables documented across data warehouse schemas

Schema	Table	What the data contains	Priority	Caveats / Notes
dwd	mdse_product	SKU attributes — shelf life, ethnicity, department, hero flag, storage type	High	Don't use tier column — use mdse_product_tier_u_inv instead
dwd	sc_inventory_version	Main sellable inventory — quantity minus open orders per warehouse per day	High	Validate with ERP check link
metrics	sku_so_inv	Sales region × product × primary vendor with quantity per case and SKU status	High	Check ERP link before use

metrics	product_availability_root_cause	FC-level OOS root cause — how unavailability was calculated per FC	High	Separate DC variant for upstream analysis
dwd	relex_forecast	Demand forecast from Relex planning system	Low	⚠ Missing data after 5/14/23 — switch to <code>sc_demand_forecast</code>
dwd	irs_network_product_calculation	IRS engine output — target qty, DOH, safety stock, and order rec per SKU × FC	High	Key table for replenishment analytics
sandbox	fillrate_weighted	Computed vendor fill rate and on-time metrics weighted by PO cost	High	Self-maintained; not an official DWH table

GitHub Version Control & Data Quality Alerting

Implemented across the analytics team — SQL, Tableau, and ETL pipeline assets

GitHub Version Control

- Led implementation of GitHub-based version control for all SQL and Tableau workbook assets across a team of 3 analysts
- Established branching, PR review, and merge practices — full audit trail on every pipeline change
- Used AI-assisted tooling to standardize query patterns and improve QA across the team
- Enabled safe iteration on production pipelines with full rollback capability

Automated Data Quality Checks

- Null-rate, latency, and schema-change checks on key tables with Slack alerting
- Stakeholder-reported data errors ↓ ~**40%**
- Airflow DAGs with failure alerting and retry logic — reporting latency ↓ ~**25%**
- Metric definitions standardized via data dictionary — dashboard discrepancies ↓ ~**40%**

07 ETL Pipeline Architecture

Raw → Staging → Final tables · Airflow DAG orchestration · Tableau & Power BI delivery

End-to-End Data Pipeline Workflow

ARCHITECT & OWNER

Full lifecycle from raw source ingestion through SQL transformation layers to BI delivery — built and owned across Weee!, Safeway, and Walmart eCommerce

LAYER 3 – DATA WAREHOUSE (REDSHIFT · SNOWFLAKE · BIGQUERY)

LAYER 4 – AIRFLOW (TRANSFORMATION DAGS) + DATA QUALITY

LAYER 5 – BI DELIVERY & STAKEHOLDER CONSUMPTION

⚡ Query runtime ↓ ~50% · Reporting latency ↓ ~25% · Manual intervention ↓ 70% · Stakeholder data errors ↓ ~40% · Pipeline reliability across 9 FCs

Sheenam Gupta · Analytics Portfolio · sheenamgupta44@gmail.com · [LinkedIn](#)
